MY ROTH IRA

Make your own Ben and Arthur chart for your savings plan. Go to the online investing calculator at daveramsey.com.

Devise two different investing scenarios for yourself. One should be based on beginning a savings plan right now. For example, if you invested $25 a month from age 18 to age 58 (40 years), how much would you have? The other should be a savings plan that you could start when you get out of school and work full time. Play around with different figures and make it your own plan. Then, make a graph of each scenario and illustrate the following.

- Investment Plan (monthly contribution for how many years)
- Total Invested
- Total Interest Earned
- Future Value of Investment
